Innovative Full Stack Developer with Expertise in End-to-End Solutions, API Integration, and Agile Project Delivery

Work Experience

Digital Security Network

July 2023 – Present

Software Engineer (Remote, Contractual)

- **Full stack developer** working closely with project stakeholders to deliver tailored solutions, ensuring alignment with project goals and client expectations.
- **Developed a flight log book application** for an aviation school, leveraging MongoDB for database management, React for the front end, and Node.js for the backend.
- **Ensured timely delivery** by meeting all project milestones.
- **Integrated APIs that provided comprehensive data** about airplanes and flights, simplifying data retrieval and enhancing the functionality of the application.
- **Worked on a Point of Sale system**, developing it with PostgreSQL and .NET C# using Windows Forms, ensuring a robust and user-friendly interface.
- **Collaborated on end-to-end development**, from database design to front-end implementation, ensuring a seamless user experience and robust data handling capabilities.
- **Enhanced application functionality** by integrating modern development practices, contributing to the overall success of the project and client satisfaction.

Thathal Information and Technological Solutions

Feb 2023 – June 2023

Software Engineer

Islamabad, Pakistan

- **Transformed static code into dynamic solutions**, enabling greater flexibility and scalability, which enhanced overall application responsiveness and user experience.
- **Migrated projects from React to Next.js** and transitioned codebases from JavaScript to TypeScript, resulting in more robust, maintainable, and performant applications.
- **Maintained and optimized databases**, ensuring data integrity and improving query performance, which contributed to more efficient application operations.
- **Increased application speed by 50%** through targeted optimizations and refactoring, significantly improving load times and user satisfaction.
- **Reduced codebase size by 70%**, streamlining the code and eliminating redundancies, which led to easier maintenance and faster deployment cycles.
- **Transitioned to microservices architecture**, further enhancing the scalability and flexibility of the applications, allowing for more efficient development and deployment processes.

Onset Media Agency

Nov 2018 – June 2021

Social Media Specialist

Florida, USA

- **Led graphic design projects**, creating visually compelling content that enhanced brand identity and engagement across various social media platforms.
- **Managed social media accounts**, developing and executing content strategies that increased follower engagement and expanded online presence.
- **Developed and maintained WordPress websites**, ensuring responsive design and user accessibility, which contributed to improved client satisfaction and website performance.
- **Handled hosting and technical issues**, ensuring websites remained operational and addressing any server-related challenges, which minimized downtime and improved site reliability.
- **Collaborated on multiple projects**, providing creative input and technical expertise that supported the successful execution of diverse marketing campaigns.

Projects

- **LMS using Angular and .NET:** Developed a web application for school and student management, utilizing Angular for the frontend and .NET for the backend. This project streamlined administrative tasks and enhanced user interaction, with SQL Server used as the database.
- **Text Editor and Image Editor:** Created both text and image editors, implementing features for formatting, editing, and saving, using modern web technologies.
- **Photo Editor:** Developed a photo editor with HTML, CSS, and JavaScript, adding functionality for image selection, filter application, and saving edited images.
- **DB Project: "Hamare Bachay":** Designed and mapped the model for an NGO as part of a database project, working on both backend and frontend using SQL, HTML, and PHP to create a comprehensive solution.
- **Commonsense Validation and Explanation (ComVE):** Trained an OpenAI GPT model using a causal language modeling (CLM) objective, demonstrating the model's predictive capabilities in natural language processing tasks.
- **Machine Translation of Urdu to English:** Implemented a transformer-based encoder-decoder model using Flask to tackle the challenge of machine translation between Urdu and English. This project involved creating and cleaning an image dataset, training data for OCR, and integrating the model into a comprehensive system.

Education

National University of Computer and Emerging Sciences	<i>Islamabad, Pakistan</i>
<i>Bachelor of Science in Computer Science</i>	Aug 2017 – Jan 2023
<i>Master of Science (Cyber Security)</i>	Aug 2024 – June 2026

Additional Skills

Languages and Databases: Python, C++, C#, TypeScript, SQL, MySQL, PostgreSQL, SQL Server, MongoDB, HTML, CSS
Frameworks and Tools: MERN Stack, MEAN Stack, .NET, Entity Framework, VS Code, Cisco Packet Tracer, Jenkins, Docker, Ubuntu, GitHub
Additional Skills: Advanced Excel, Business Analysis, Data Analysis, Customer Acquisition
Soft Skills: Leadership, Project Management, Creativity, Problem Solving, Interpersonal Skills, Communication
